Reza is the global lead for the “Integrated Quality and Real Time Release” initiative for the Large Molecule Platform introducing new technologies in parallel with the launch of new products or with life cycle management projects. He works with team members around the globe from clinical phase I through to product launch. He also leads the Drug Product Stronghold within Janssen's Parenteral Center of Innovation and oversees technical evaluations for product sourcing and network configuration initiatives. He holds a Ph.D. in Pharmaceutical technology and has worked within R&D and Operations in various functions.
