

## Enabling the Evaluation of COVID-19 Vaccines with Correlates of Protection Vaccinopolis University of Antwerp, Belgium February 16 - 17, 2023

### **Merryn Voysey, DPhil**

Associate Professor, Head of Statistics in Vaccinology  
Oxford Vaccine Group, Department of Paediatrics, University of Oxford.

[Merryn.voysey@paediatrics.ox.ac.uk](mailto:Merryn.voysey@paediatrics.ox.ac.uk)

Merryn Voysey is Associate Professor of Statistics in Vaccinology at the Oxford Vaccine Group. She has extensive experience in vaccines research including clinical trials and observational studies, and was the lead methodologist for the Oxford-AstraZeneca vaccine trials. Her current research interests include maternal antibody interference, vaccine correlates of protection, and the seroepidemiology of bacterial infections

She is the Principal Investigator on a large individual participant data meta-analysis of serological data from vaccine clinical trials funded through the NIHR HTA, and PI of three studies funded by the Bill and Melinda Gates Foundation: a multi-country study of maternal measles seroprevalence in infants, a clinical trial of the timing of measles vaccination in Ugandan infants, and a study of the contribution of T-cell immunity in protection against SARS-CoV-2.
