Dr. Sui received her Ph.D. in pathology from Beijing Institute of Basic Medical Sciences and completed her postdoctoral training in Dr. Opendra Narayan's lab at the Department of Pathology and Microbiology in the University of Kansas Medical Center, and Dr. Todd Reinhart's lab at the Department of Infectious Diseases and Microbiology in the University of Pittsburgh. She joined Vaccine Branch, NCI, as a staff scientist in 2008. Dr. Sui's research interests focus on the development of mucosal HIV and SARS-CoV-2 vaccine using non-human primate and rodent models. She is interested in identifying innate and adaptive immune correlates of protection against HIV and SARS-Cov-2 infections, as well as exploring trained innate immunity mediated by myeloid cells.
