

www.iabs.org

Epidemics constitute the greatest threat to human and animal health.

Covid-19, Zika, Ebola, Influenza...these and other viruses are on the rise and are truly challenging to treat.

We need biological products

Biological products such as vaccines, cell and gene therapies, blood products...are essential to prevent and fight novel epidemics.

Health solutions for everyone everywhere

To meet the ever increasing challenges to public health, standardization will secure quality standards, facilitate distribution, reduce costs and expand access to biologicals.

The International Alliance for Biological Standardization

Since 1955, IABS has fostered communication between the major stakeholders, facilitated consensus among scientists working in biologicals, contributed to accelerating decision-making and regulatory solutions in order to encourage the standardization of biological products throughout the world.

HELP PROVIDE BETTER ACCESS TO BIOLOGICAL PRODUCTS

We need you to

Reduce the time required to develop, produce & authorize biological products

Promote innovative health solutions

Help control or eradicate certain diseases

Tomorrow, with your support, we will save more lives.

IABS actively contributes to the fight against Covid-19

- International scientific meeting in Lyon, France : February 2020. 120 participants explored novel approaches for dealing with emerging epidemics : WHO, Gates Medical Research Center, Coalition for Epidemic Preparedness Innovations (CEPI), Institut Mérieux, Université de Lyon, Boehringer Ingelheim, Sanofi-Pasteur, INSERM, Harvard University, Oxford University, OIE...
- Open access webinaire in May 2020 : 450 scientists from around the world participated in the meeting so as to better understand and conquer the SARS-CoV-2 virus.
- + 4 subsequent webinars that will focus on the development and distribution of Covid-19 vaccines.
