Yves Briers is an Associate Professor and head of the Laboratory of Applied Biotechnology at the department of Biotechnology of Ghent University (Belgium). The research interests of his group focus on the synthetic biology of modular proteins with a particular focus of phage proteins such as lysins and phage receptor binding proteins. He co-founded the Belgian Society for Viruses of Microbiology in 2022, which he currently chairs. Last year in summer 2023 he founded the spinoff Obulytix that develops phage lysins for human therapy, for which he is currently acting as parttime CSO.
