Dr. Christopher Frye is currently Vice President and Senior Research Fellow within Eli Lilly & Company's Bioprocess R&D (BR&D) organization. Chris completed his undergraduate studies in Microbiology and received his doctorate in Molecular Biology and Biochemistry from Indiana University. He has been a researcher at Lilly for nearly 35 years, all of which has been spent within BR&D. During his tenure at Lilly, Chris has been involved in developing drug substance and drug product manufacturing processes, primarily supporting the clinical development and commercialization of therapeutic proteins and a wide range of bioconjugates. He has leveraged both mammalian and microbial expression systems to develop effective, efficient manufacturing "platforms" supporting the Lilly's diverse large molecule portfolio. A focus of Chris' efforts has been centered on continual process improvement and the implementation of innovative technologies to ensure capability in meeting the needs of an evolving portfolio and accelerating delivery of medicines to patients.
