

Breakout session – further analyses of MATISSE

Vaccination-Delivery Interval & GA measurements

Vaccination-Delivery Interval = GA at birth – GA at vaccination

Shaded areas should not be possible with protocol adherence and exact GA measurement

Vaccination-Delivery Interval – Cumulative Distribution

Very similar distribution between groups

GA at birth exhibits rounding to whole weeks

- Preference for recording GA in whole weeks – most obvious at 38, 39, 40 weeks
- Preterm definition = strictly less than 37 weeks. Any rounding up to 37 weeks classifies infant as 'term'

Week / Day GA at Birth
